Amkai Announces Installation of AmkaiEnterprise™

AmkaiEnterprise puts Amkai in a league by itself by delivering a comprehensive paperless solution for the ASC and affiliated practices

Waterbury, CT --- October 16, 2008 --- Amkai announced today that has implemented in several organizations AmkaiEnterprise™, a comprehensive software solution that provides both administrative and clinical data management to ambulatory surgery centers and affiliated physician practices. This solution allows such organizations to arrive at paperless operations, while sharing relevant data, improving efficiency and reducing errors.

“At this time we are not aware of any other vendor that is able to deliver such a comprehensive solution developed and supported by one company”, said Peter Sereny, CEO and CTO of Amkai. “So far no one has countered this statement. Such a solution can deliver huge benefits by avoiding duplicate data entry, as relevant data is share across businesses, such an Ambulatory Surgery Center and affiliated practices. An added significant benefit is the commonality of the user interface, so that users do not have to constantly be on the alert for changes in how a system is used as they go from function to function”, he added.

AmkaiEterprise™ represents the installation of both AmkaiOffice™ and AmkaiCharts™. AmkaiOffice™ is Amkai’s administrative solution delivering functionality such as registration, billing, scheduling, messaging and work flow tools, whereas AmkaiCharts™ is a discrete data, flexible, easily customizable EMR that includes a PMR component.

About Amkai

Amkai delivers comprehensive information management for outpatient surgery providers across every stage of administrative and clinical workflow. Amkai’s suite of business management, electronic medical record, CPOE, e-prescription, and related applications promotes streamlined operations, structured data exchange, and patient safety.
