Amkai announces the availability of anesthesia billing

Anesthesia billing is an integral part of most ambulatory surgery centers and surgical hospitals – by providing this special requirement, AmkaiOffice™ rounds out its capability to fully support such facilities.

Waterbury, CT --- March 14, 2009 --- Amkai announced today that it has delivered anesthesia billing capabilities in its flagship administrative management software solution, AmkaiOffice™. Anesthesia billing has unique requirements that cannot be delivered by a practice or surgery center administrative system. Yet, it is an integral component of most ambulatory surgery centers.

AmkaiOffice™ is complemented by AmkaiCharts™, Amkai's clinical record keeping solution (EMR) designed for surgery centers, surgical hospitals and affiliated practices. When implemented together the suit it called AmkaiEnterprise™. AmkaiEnterprise™ was developed to offer the ultimate in efficiency and convenience allowing a surgery center and affiliated physician practice to become paperless. This becomes reality with the addition now of anesthesia billing capabilities.

"We at Amkai continue our quest to provide the most comprehensive, most efficient, easiest yet most complete system possible", said Craig Veach, Senior VP. "This is only possible by continually listening to our users. The introduction of anesthesia billing is an example of our on-going commitment", he added.

About Amkai
