

**Amkai Inc, announces the availability of Amkai Enterprise™**  
*Comprehensive software solution for Ambulatory Surgery Centers,  
Surgical Hospitals, and Physician practices.*

Waterbury, CT – September 15, 2006--Amkai, Inc announced today the introduction of Amkai Enterprise™ (AE™). AE is a software solution complementing the company's popular AmkaiCharts (AC™) electronic health record by providing administrative management tools . AE installed with AC allows an Ambulatory Surgery Center (ASC), Surgical Hospital (SH), and Physician practices (PPM) to become paperless, while seamlessly sharing information.

“Our vision is now reality. The ASC and SH industries and their affiliated physician practices have been asking for a comprehensive software solution developed by one company. With AE we have fulfilled that vision, and we supply the long awaited solution,” said Craig Veach, Senior Vice President of Amkai. “This comprehensive solution developed by Amkai, and our focus on and dedication to Ambulatory Surgery Centers (ASC), Surgical Hospitals (SH), and affiliated Physician practices (PPM) makes us unique. Other companies that claim to have a similar solution typically license components from various sources. This does not achieve complete integration, and often limits data sharing. In addition, the look and feel of the patched together applications are not the same, significantly detracting from usability and efficiency”, he added.

The Amkai Enterprise solution delivers a promise unfulfilled to-date: the seamless handling of all administrative and clinical data with one cohesive solution. AE takes into consideration those facilities that do not have a need for all the functionality available in the software. We accommodate these sites by the ability to selectively implement only the needed functionality, resulting in a lower cost, and a more usable and facility specific solution.

Amkai has also developed exciting complimentary products, such as:

- **PMR Portable Medical Record** provides the capability to extract part or all of a patient's record and securely email it, or save it on a mini disk or memory stick.
- **TM-- Amkai's Transcription Manager** automates the distribution of transcribed notes directly into the patient's record, and within the record, into the right field. TM was developed for those situations where a gradual transition into an EMR is desired, or there is a continued need for this capability.

Phone: 36-1-290-8780

- **Scan Manager** allows the facility to incorporate the occasional paper documents so that they become part of the patient's electronic health record.
- **CPOE** – Computerized Physician Order Entry exceeds in functionality stand alone systems that can cost in excess of \$100,000.
- **Pharmacy Management** – designed with the Surgical Hospital in mind, to meet their unique requirements.
- **PIC Patient Information Center** provides waiting room kiosk functionality and much more. Allows patients to complete forms in a kiosk or on-line. The completed forms become part of the patient's record. Ideal for pre-op questionnaires and post op surveys with resultant data analysis and outcome studies.

A recent review "The Greatest Software Ever Written" by Charles Babcock (InformationWeek Aug 14, 2006) lists only 12 entries qualifying as the greatest software achievements of all times. There is only one programming language on this distinguished list, JAVA. Amkai uses JAVA as its development language. "Our choice of technology is once again proven to be correct," said Peter Sereny, CEO and CTO of Amkai. He added: "Our vision of delivering to our clients, and the outpatient healthcare industry, a revolutionary software solution developed by one company is now a reality. Our software offerings are unmatched".

**About:**

Amkai, Inc is a software solutions company dedicated to serving the IT needs of Ambulatory Surgery Centers, Surgical Hospitals and Physician practices. The company is headquartered in Connecticut with offices also in Europe, and installations nationwide.
